

# Gaius Point Uplands UWR Fuel Management Treatment

Photo Inventory

# Gaius Point Monitoring Photo Plots

- Goal was to document the state of the UWR before and after harvest in order to:
  - Monitor crown closure, stocking, blowdown of retained trees, brush release, and eventually plantation performance.
  - Effectiveness of the site plan can also be assessed.
  - Plots were randomly located (2 per block, 10 in total) prior to harvest, and marked by GPS only.
